Skip Rate (%)	0	0.6	0.6
Ads Listened per Week	0	49	49

Missing Value Analysis & Duplicates Check	
Duplicates	0
Is Null	0

Explanations & Notes
- Due to lag, I am starting the data cleaning process over using MySQL from Excel
- Checking for null values so that my data is not misleading or miscalculated - Checking for null values in each column of the dataset using COUNT(CASE statements with no ELSE. I did not use the more general syntax COALESCE because it will change my null to 0 value. So when I count it will count the null and not null. - I've learned I can use SUM(CASE with ELSE (if i needed an else) - no nulls found in dataset (no bias kpi)
- Validating the ranges and values in numeric behavioral columns to make sure the data is valid and usable - Skip rate is a ratio (0.6) so this plays a part in formula for how we calculate the skip rate - MIN, MAX, AVG
